

Press access and resources for the press (cooperation)

Free press access

Representatives of the press can obtain free press access. This includes all functions of the "Professional" membership. Please contact Günter W. Reichelt by e-mail at guenter.reichelt@cosmeticanalysis.com. For press access we need your

- First name and surname
- Your function
- Your publisher or the publication for which you would like access
- Street, postal code, city and country
- Telephone number and e-mail address

Cooperation

In particular, cooperation with the following options may be of interest to the trade press.

We can select special technical information from our databases for you. This is based on information of more than 9'800 INCI substances with more than 34'000 properties from more than 100 technical publications as well as more than 46'000 product analyses.

Share of certain substance properties in the number of total INCIs:

Example: for certain technical information, it may be interesting for your target group to know how many substances of the more than 9'800 INCIs are **hormone active**. In this case the result is: 88 substances. For the property "**carcinogenic**" it is 490 substances. For example, you can also find out these results for keywords such as:

- Substances that have protein- and mutagenic effects.
- Substances that are phototoxic
- Substances that accumulate in the liver
- Substances that accumulate in organs
- Substances that accumulate in kidneys and lymph nodes
- Substances that have a cell-damaging effect
- substances that have an allergizing effect

and many more.

Proportion of all over 46,000 products that have the above properties in the INCIs:

The logo consists of three overlapping circles: a red one on the left, a yellow one in the middle, and a green one on the right.

Cosmetic Analysis

How many products contain **microplastics**, for example? In this case, it is 21,987, which corresponds to about 47 percent.

In the case of **endocrine disruptors**, this is the case for 12,324 products, or over a quarter of all products.

This possibility of research also exists for all the above-mentioned properties.
